

DRONE CERTIFICATION

UNMANNED AERIAL SYSTEMS

The UAS (Unmanned Aerial System) Drone Certificate is designed to give the student a solid foundation in understanding unmanned aerial vehicle system technologies, capabilities, regulations, safety, and legal responsibilities. The certificate will provide the student with both FAA regulations and knowledge along with practical flight skills necessary to successfully operate a UAV. This 2-credit certificate consists of a hobbyist-targeted fundamental course and commercial-use focused intermediate course using high-end UAV (Unmanned Aerial Vehicle) drones.

Interested in the course but unable to make it to campus? Distance learning is an option with no need to come to class! As long as you have access to a personal drone that includes a camera to record video or take pictures, you are eligible to become certified.

Course #	Course Title	Credits
487-101	Hobbyist Drone Operations	1
487-102	Commercial Drone Operations	1
Total Credits		2 cr.
